Product Information

Cabin Air Filter

CORTECO offer original quality spare parts and continual range development:

Cabin Air Filter

Filter types:

Particle filter: Optimum protection against solid matter and particles like dust, soot, brake and tyre abrasion particles and all forms of pollen - very important for people with allergies and asthma.

Combi filter:

In addition to the particle filter the combi filter from CORTECO- with activated carbon - protects against gases and smells like chemical air pollution, ozone contamination, manure and diesel fumes - more driving comfort and protection!

Why Cabin Air Filter?

The cabin air filter cleans the air entering or re-circulating inside the passenger cabin of a vehicle through the air conditioning system and offer protection against:

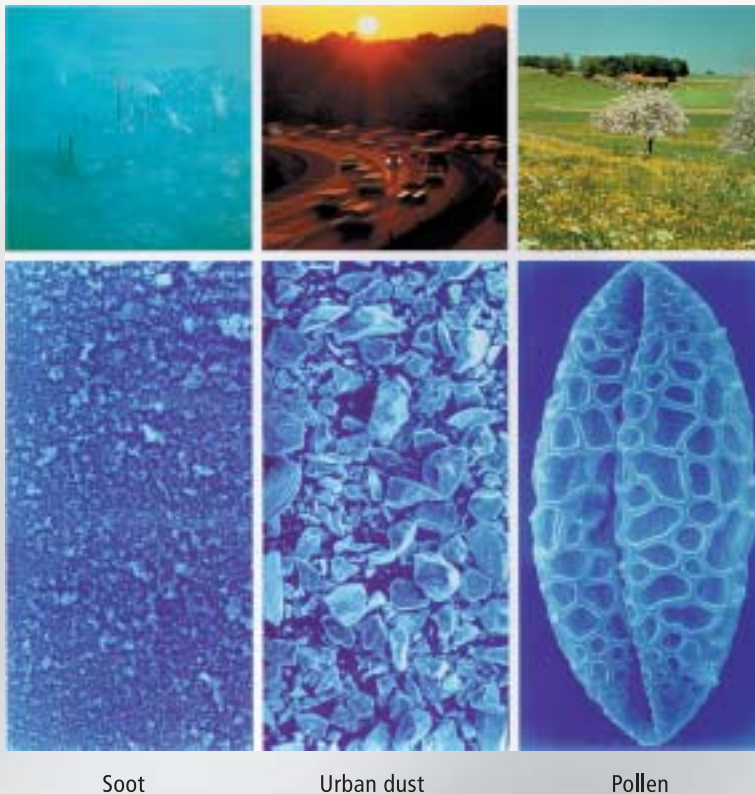

- solid matter and particles
- gaseous contaminants
- unpleasant smells

Recommendation:

To guarantee the optimum protection of the occupants, cabin air filters should be exchanged every 15,000 to 30.000 kms or at least once a year, regardless of the distance driven.

Comparison between size and origin of typical particles

Protection of occupants and aggregates.

CORTECO cabin air filter - available as modern Combi- and Particlefilter - care for reliable filtration of harmful substances and therefore increase driving comfort and well-being in the vehicle. Microbiological particles - source for unpleasant smell out of the air condition - don't stand a chance to settle down.

On the other hand the contamination of the components of heating- and aircondition system will be reduced.

Our Services

Customer-oriented, comprehensive services - from delivery to active sales support. CORTECO offers a complete range in original equipment quality for all conventional car brands from Alfa to VW. Installation instructions and service tags are included with each CORTECO filter.

What can we do for you?

CORTECO cabin air filter -

Quality for a first-class driving experience through:

- State-of-the-art fleece technology which is the basis for a high level of effectiveness against contaminants
- Fitting accuracy to the various vehicle types results in highest performance and effectiveness
- Optimum installation handling with every vehicle type thanks to their exact fitting precision
- Most stringent quality control tests in all production phases
- Protection of the vehicle's heating and air conditioning system thanks to their high level of effectiveness
- Protection of the vehicle occupants against solid matter, particles and gases, thereby eliminating health hazard
