

ORIGINAL QUALITY FROM CORTECO.

SPRINTER SPARE PARTS TO BOOST YOUR TURNOVER.

WE We are the sales organisation for the independent aftermarket and are an organisation within the Freudenberg Group who are the world's leading Original Equipment Manufacturer of sealing and vibration technology as well as cabin air filters.

OFFER You can offer original quality to your customers: When buying from CORTECO you are accessing Freudenberg's development expertise and are benefiting from innovative spare parts in original quality. You are thereby guaranteed a high product life span, perfect fit and easy assembly with the result that your customers are happy.

MORE More spare parts in original quality for more opportunities in the growing market of transport vehicles. Our portfolio comprises more than 18,000 products and service kits. The product coverage for the Sprinter is particularly broad, which means that we usually have the right product available for each model.

Cabin Air Filters

Worldwide every second new car is fitted with a micronAir® filter made from non-woven material. Its multi-layered structure offers close to 100% protection from pollen, odours and contaminants inside the vehicle. At the same time they are highly robust as well as moisture resistant.

Seals

Pressures and temperatures in modern engines are steadily increasing. Consequently, seals have to compensate ever increasing dynamic deformation. We, the inventors of the Simmerring® and manufacturer of gaskets in original quality, are offering the widest selection of seals.

Vibration Technology

We supply engine mounts, transmission mounts, suspension mounts and hydro mounts. With vibration technology products you should pay particular attention to quality, as only original products are designed to suit a particular vehicle 100% and can fulfill the requirements specified by the automotive manufacturer.

Brake Hoses

CORTECO brake hoses – for your safety. Our brake hoses feature double sheathing which provides both the necessary elasticity as well as extendibility. They therefore offer high wear resistance throughout.
